## INDEX OF FUNGI

### Introduction

In the compilation of the Index of Fungi, the following routine has been observed.

Authorities of new names are not abbreviated. All specific epithets are de-capitalized. Only the host of the type specimen is listed, but if more than one host is given without specification of the type collection, all such hosts are listed.

*Nomina nuda* are omitted.

Names of new genera, species, or infraspecific taxa published without Latin diagnoses, as required for valid publication on or after 1 January 1935 by Art. 36 of the *International Code of Botanical Nomenclature* (1966), are indicated by an asterisk (\*).

New combinations or new names published on or after 1 January 1953 without full reference to the author and original publication of the basionym as required by Art. 33 of the 1966 *Code* are indicated by a dagger (†).

Art. 37 of the 1966 *Code* states that publication on or after 1 January 1958 of the name of a new taxon of the rank of family or below is valid only when the nomenclatural type is indicated. It is not always practicable to decide whether or not the requirements of this article have been fulfilled, and apparent failure to do so has therefore not been indicated in this *Index*.

Publication of a name by one author in a work by another is indicated by the word 'apud' when the work is in a serial publication and by the word 'in' when the work is a book.

Serial publications are usually cited as in the *World List of Scientific Periodicals*, Ed. 4 (1963-65).

Successive citations referring to the same article in the same journal or to the same book are indicated by the word '*ibid.*' followed by the page reference and date of publication from Vol. 3, part 3 (p. 73) onwards.

Fungus names published during the years 1920-1939 which were omitted from *Petrak's Lists* and are not listed in the *C.M.I. Supplement to Petrak's Lists* are incorporated in Vol. 3, part 19 (p. 523) and onwards.
